QUARTERLY
Fluoride & Arsenic
(Mar, Jun, Sept, Dec)

Fill out chain of custody form.

Inside BLACK filing cabinet, grab 2 bottles. 1 for fluoride and other one for arsenic. (Arsenic bottle will have a label with HNO₃ written on it. See bottle images.)

Grab orange bucket located on top of the white cabinet and place it underneath spout next to red tank.

Turn on valve. (Only needs to be turned a little bit).

Go to sink and turn cold water all the way and wash hands. Leave water running until water comes out other spout. This sometimes takes a while because you need to wait for the pump to depressurize and kick on. You can collect your water samples from vending machine while you wait for water to come out other spout.

Reason for valve to only be turned a little bit is because the water will shoot out past the orange bucket and flood the floor. Once the water starts to come out, you can adjust the flow.

Let the water run for a bit. Then take your 1st bottle and collect sample. Then take 2nd bottle and collect sample.

Record time sample was taken.

Grab measuring cup (Make sure wiped clean), and TDS meter. Take TDS plus temperature reading and write it on chain of custody form.

Take sample to Shoshone store. Sign, date, and time relinquished to store clerk. Let clerk know to refrigerate sample. Leave c of c form with clerk. Susan Sorrells will take samples to Vegas the next day.

Call or text Susan to let her know you dropped off the water sample.
